

Guilherme Monteiro Gadelha

Campina Grande, Paraiba, Brazil

Email: guilhermemgadelha@gmail.com

Phone: +55 (83) 99877 5989

Github: <https://github.com/guilhermemg>

Linkedin: <https://www.linkedin.com/in/ggadelha/>

PROFILE

Autodidact and goal-oriented individual seeking opportunities to build top solutions in the machine learning and data science industries. Strength areas:

- Self-motivated with a focus on continuous learning
- Team player with excellent analytical skills
- Passion for solving complex problems
- Strong ethical sense
- Reliable and assertive team leader
- Expert in developing and deploying AI-driven systems
- Led teams in developing state-of-the-art AI solutions handling over 100,000 daily requests

EDUCATION

Ph.D. in Artificial Intelligence Federal University of Campina Grande (UFCG)	January 2024 Campina Grande, Brazil
M.Sc. in Software Engineering Federal University of Campina Grande (UFCG)	July 2019 Campina Grande, Brazil
Bachelor in Computer Science Federal University of Campina Grande (UFCG),	December 2016 Campina Grande, Brazil
Sandwich-Undergraduate in Computer Science Xavier University	Fall 2014 – Spring 2015 Cincinnati, OH, USA
Scholar Researcher University of Alabama – Cloud and Cluster Comp. Lab	Summer 2015 Tuscaloosa, AL, USA

RELEVANT COURSES

LangChain	Finetuning LLMs
Generative AI with LLMs	Large Language Models
Data Analysis	Software Engineering
Machine Learning	Business Intelligence
Deep Learning	Data Structures & Algorithms

SKILLS

LLMs: ChatGPT, Gemini, Ollama, LangChain, LangSmith, ReAct, Prompt Engineering
Machine Learning Tools: Tensorflow, PyTorch, ONNX, Scikit-Learn, Pandas, Numpy, Neptune.ai
Cloud Platforms: GCP, Azure, OCI
Databases: Hive, HBase, Oracle, PostgreSQL, MySQL, MongoDB, Elasticsearch
Programming Languages: Python, Javascript, Java, C++, Bash, R, C#
Operating Systems: UNIX-like OS's, Windows
Integrated Development Environments: VSCode, Jupyter Lab, Visual Studio
Others: Spark, Hadoop, Docker, Microservices, MLOps, ELK, Kafka, OpenCV, Git, Azure DevOps

EXPERIENCE

- AI Tech Lead** (Vsoft Technology): July 2021 – Present.
- Led the challenging face liveness detection project to a state-of-art level comparable with big players in the market with over 98% accuracy. Increased the system security and reliability and simultaneously reducing the friction with the final user.
 - Led the research and development of an innovative face recognition system inside the company with a top accuracy when compared with systems of top international players and capable of attending thousands of requests daily.
 - Developed and deployed a microservice utilizing Google LLM Gemini in record time to automate extraction of key data from birth and marriage certificates, drastically reducing manual processing and enhancing data accuracy.

- Led the Data Science and Machine Learning team to adopt MLOps practices and continuous integration and delivery of microservices solutions with an integrated Hadoop-based Data Lake platform and cloud environments based on Azure and Google Cloud Platform using Agile methodologies.
- Architected the work cloud environment in GCP for the R&D team, transferring, organizing the tools and estimating the costs in comparison to the previous data platform used (OCI), reducing cloud resource costs by 40%, significantly optimizing the company's operational budget.
- Architected the R&D solutions related with AI, guiding multiple projects simultaneously through the various phases of the MLOps pipeline (project conception, data collection and labelling until the management and monitoring of the models/services in production).

Data Scientist / ML Engineer (Vsoft Technology): December 2019 – June 2021.

- Analyze data to extract insights and trained multiple models and developed solutions for many projects like face liveness detection, face detection, face recognition and related biometric services. Many services are currently in production, attend over 100k requests per day and are in the process of international certification.

Software Practices Laboratory (SPLab – UFCG): November 2016 – July 2018.

- Developed a system of logistic control and issuing invoices based on C# and ASP.Net.

Analytics Laboratory (LabAnalytics – UFCG): August 2015 – April 2016.

- Designed and developed a proof of concept for a Big Data Architecture for a new brand android-based application so-called YourVoice;
- Some of the technologies used were Hadoop, Spark, Spark Streaming, Cassandra, and Kafka.

Distributed Systems Laboratory (LSD – UFCG): March 2012 - June 2014.

- Developed software for image processing to extract visual features of photographs.
- Programmed the distributed backend and front-end to Web applications using Python, Javascript and JQuery framework;
- Contributed actively to the open-source project PyBossa for citizen-science and distributed human computation in the EU-Brazil cooperation for e-infrastructure expansion.

Computer Vision Laboratory (LVC – UFCG): August 2011 - March 2012.

- Developed a software of image processing to extract visual features from photographs.

RECENT PUBLICATIONS

Neural Architecture Search in the Context of Deep Multi-Task Learning. VISIGRAPP, 2024;
Transfer learning for face anti-spoofing detection. IEEE Latin America Transactions, 2023;
Traceability recovery between bug reports and test cases - A Mozilla Firefox case study. AUSE, 2021.

ACTIVITIES

Speaker at 5th Meetup of Paraibas' Artificial Intelligence Community, 2024;
Speaker at Internal Tech Workshop, MLOps in Practice, Vsoft, 2022.;
Member Volunteer, Guardians Group of Sys. Admins., UFCG, March 2011 – March 2012;
Teacher Assistant, UFCG, May 2013 - February 2014.

AWARDS AND LEADERSHIP

Silver Medal, Paraiba's Programming Olympiad, Fall 2011;
 Recipient of Excellence Scholarship for academic merit, 2009.
